

# **Jolteon: Unleashing the Promise of Serverless for Serverless Workflows**

**Zili Zhang, Chao Jin, Xin Jin**

**北京大學**  
PEKING UNIVERSITY

# Serverless computing

AWS Lambda

Azure Functions

Google Cloud Functions

Knative

---

## Fine-grained resource elasticity

- Auto-scaling
- Concurrency from 1 to 1,000

## Fine-grained billing

- 1 MB memory granularity
- 1 ms time granularity

# Serverless workflow

AWS Step Function

Azure Logic App

Google Cloud Workflow

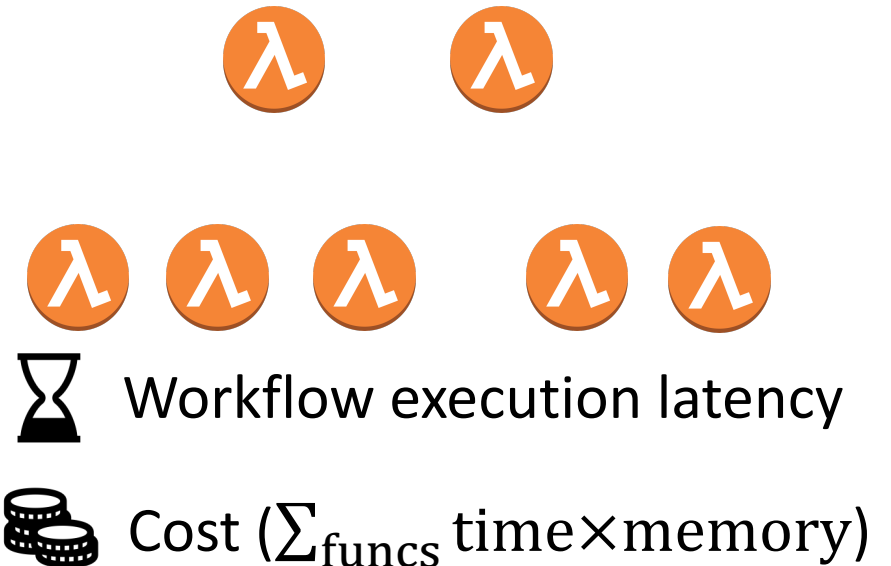

## Job Execution DAG

Data parallelism

## Serverless functions

# Resource configuration: a new problem

## Fine-grained resource elasticity

Can we decide the resource configuration automatically to satisfy application-level requirements for serverless workflows?

More resources  
Faster, higher cost

Less resources  
Slower, lower cost

**Function size**

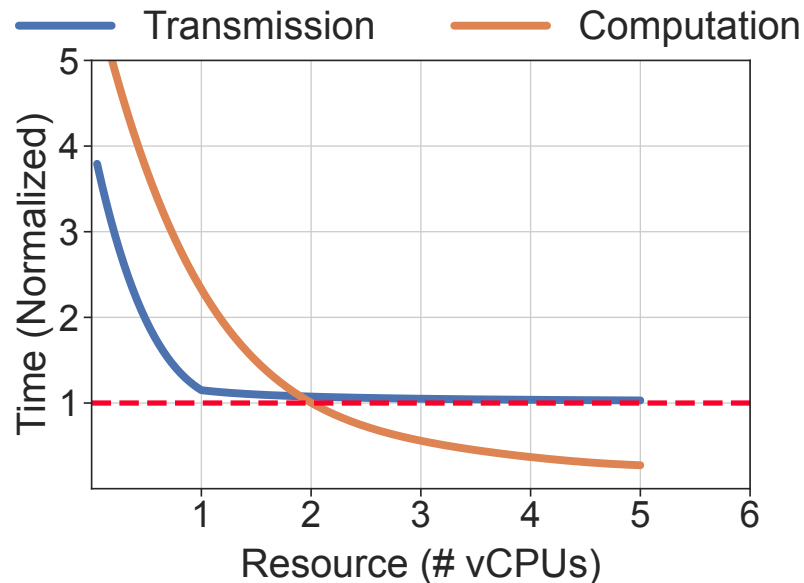

**Degree of parallelism**

# Performance model

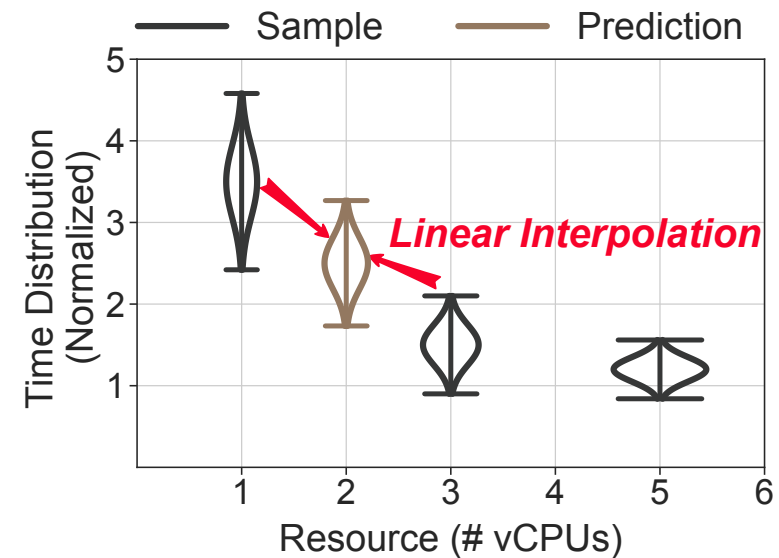

## White-box model (Ditto, SIGCOMM'23)

Capture the characteristics step-by-step

## Black-box model (Orion, OSDI'22)

Capture the performance variability

# Solve the optimization problem

## Possible configurations

...

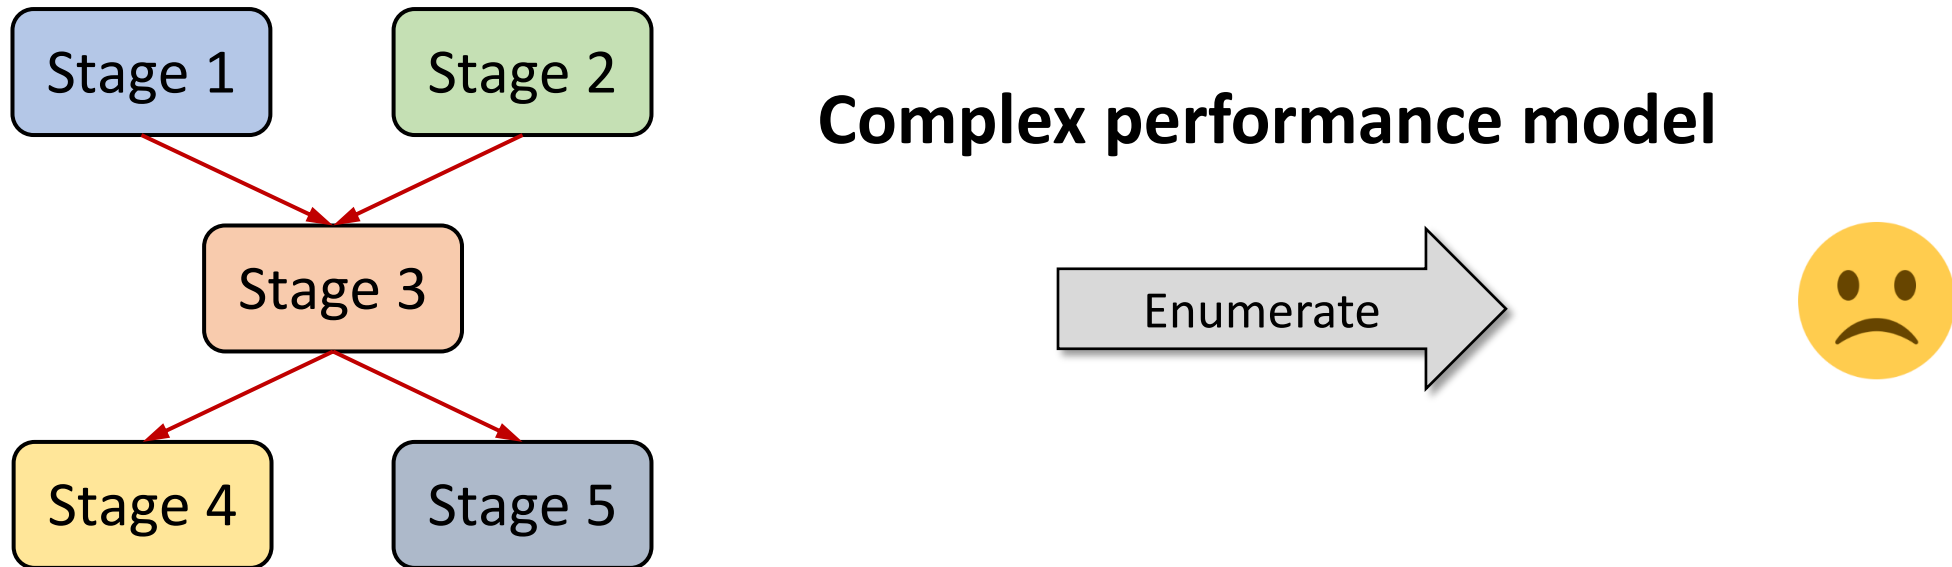

500ms/1\$

## Optimal configuration

# Solve the optimization problem

# Jolteon design outline

## Challenge 1: How to build the performance model?

- **Analytical model** → Fast and accurate prediction on average time
- **Distribution-aware model** → Guarantee performance bound

## Challenge 2: How to optimize the optimization problem?

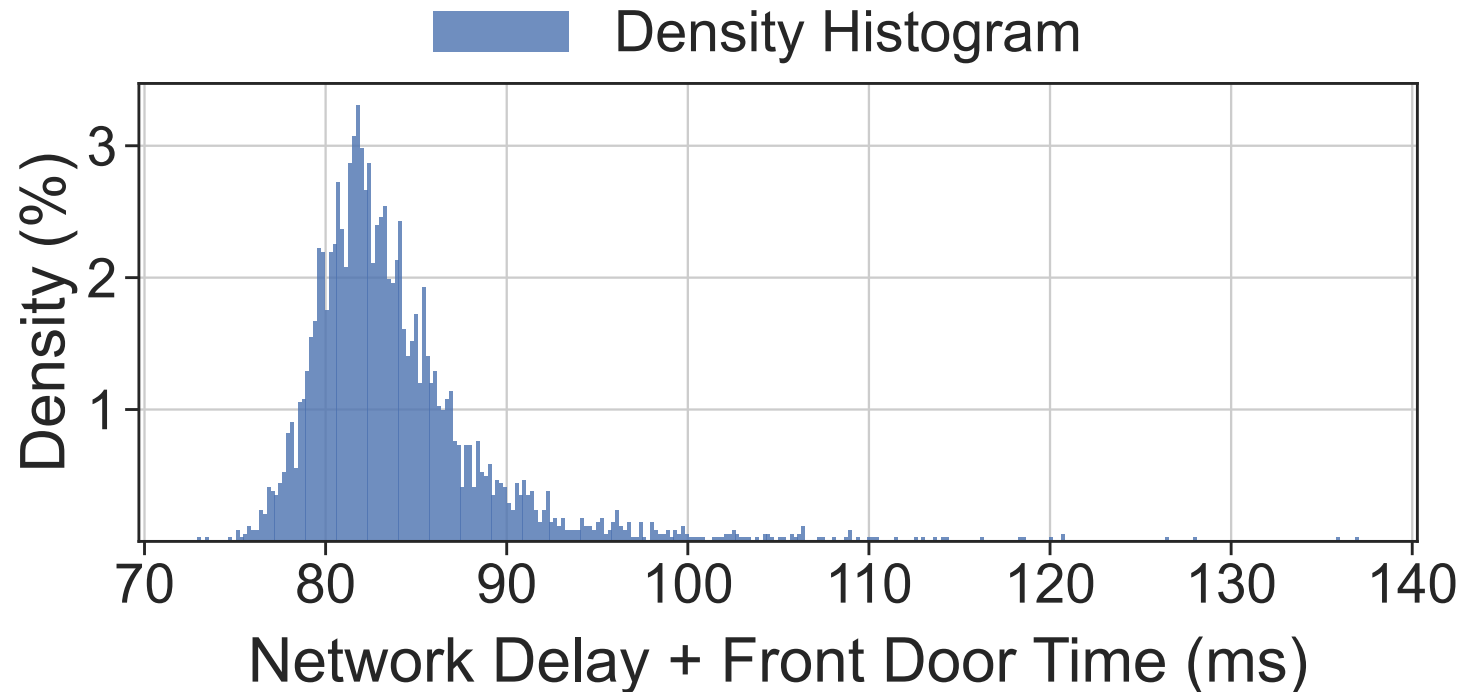

- **Formulate the optimization**
- **Fast solve the problem with optimal result**

# Performance model: **initialization**

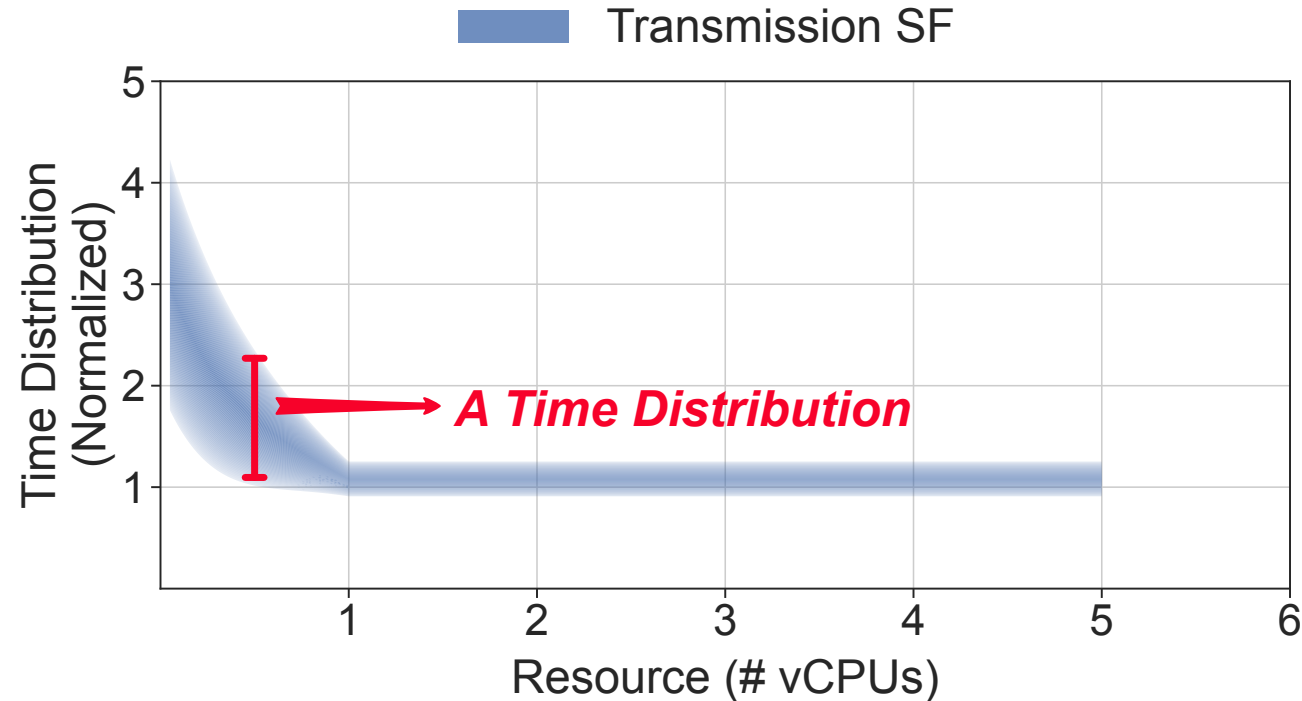

- Network delay
- Front door execution
- Image transmission
- Load container

**→**  $D + G$

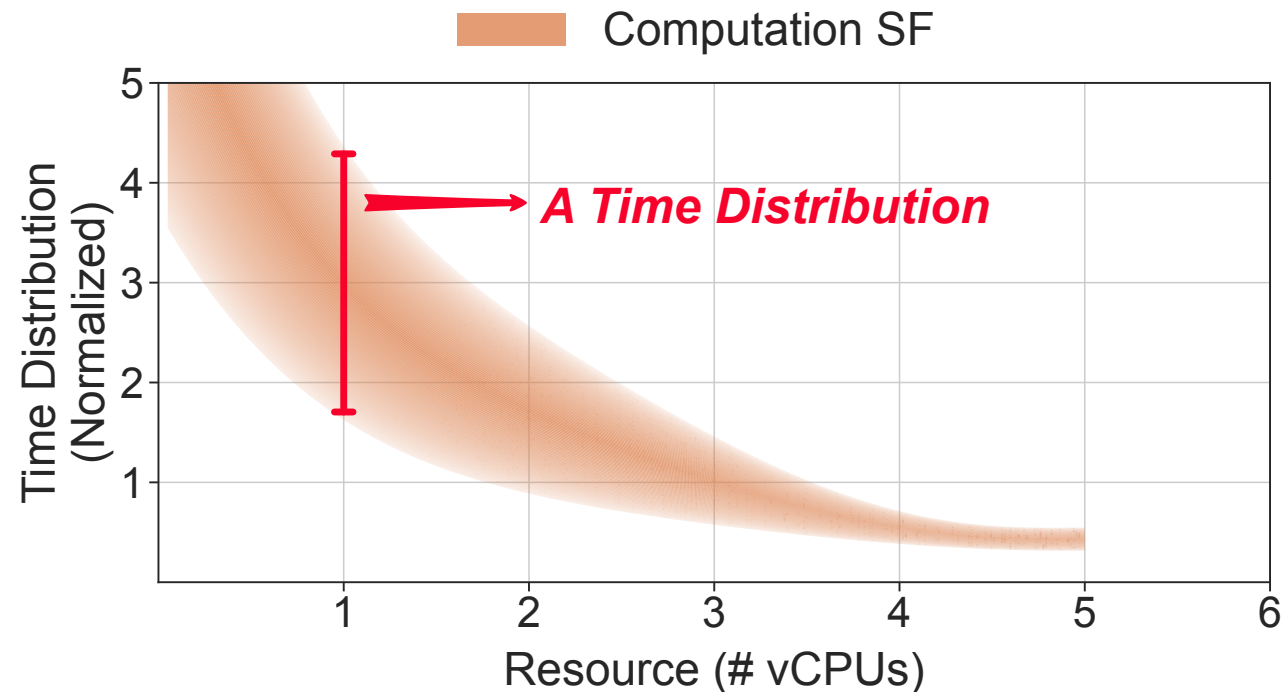

# Performance model: **transmission**

$$T(d, v) = \frac{S}{d \times \min(v \times W, B)} + O_T.$$

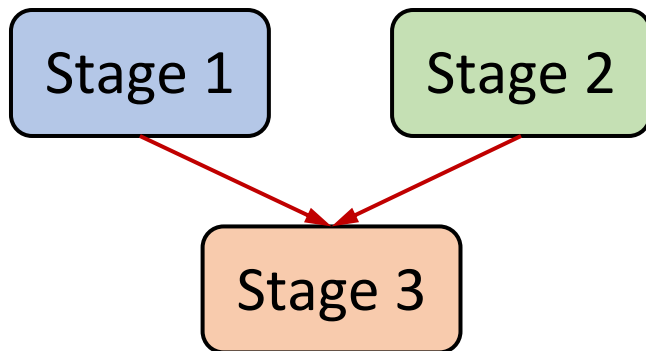

# Performance model: **computation**

$$C(d, v) = \sum_{i=0}^l \left( A_i \times \left( \frac{S}{dv} \right)^i + \ln \frac{S}{dv} \times \left( \sum_{i=0}^m B_i \times \left( \frac{S}{dv} \right)^i \right) \right).$$

# Performance model: **workflow**

Stochastic performance model: analytic formulas with random variables

$$Time = \max \{stage\ 1, stage\ 2\} + stage\ 3$$

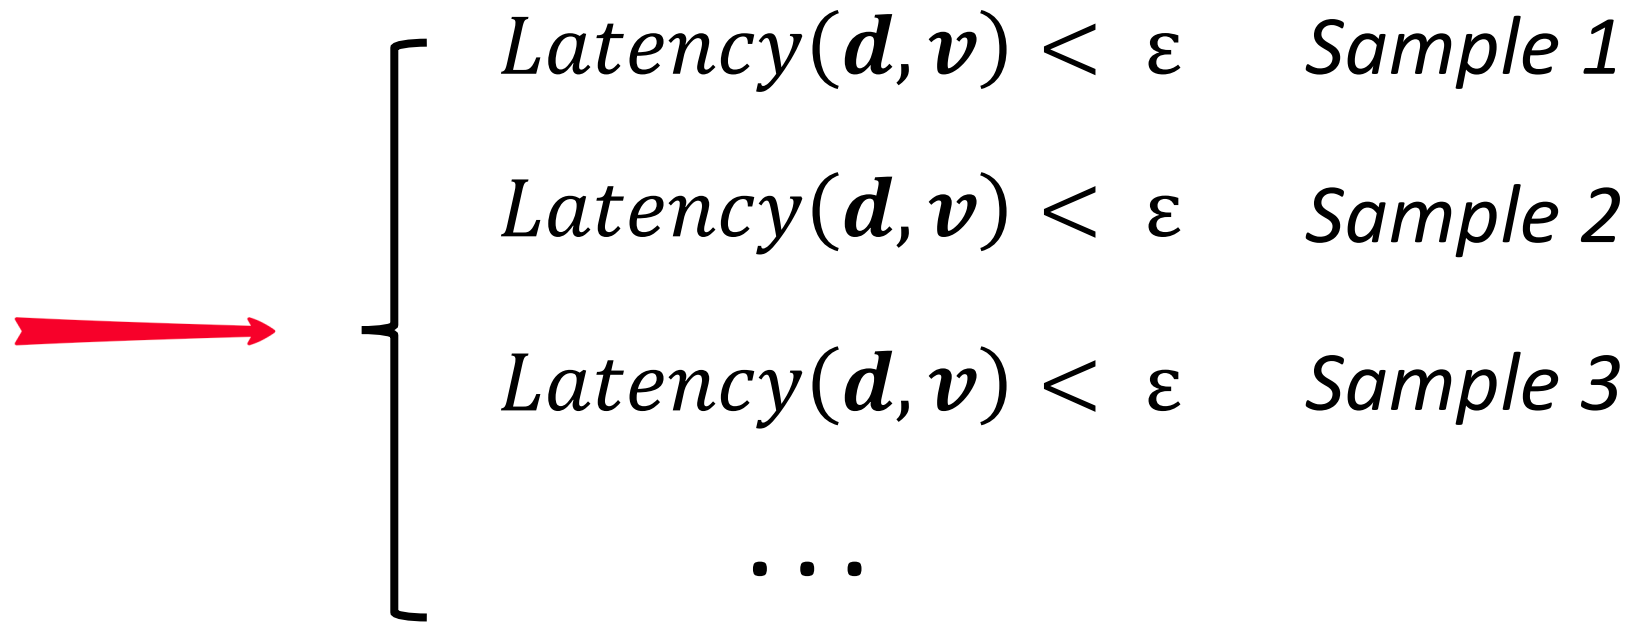

# Problem Solver: **problem formulation**

- Objective: minimize cost
- Guarantee the latency bound  $\varepsilon$  with confidence level  $\delta$

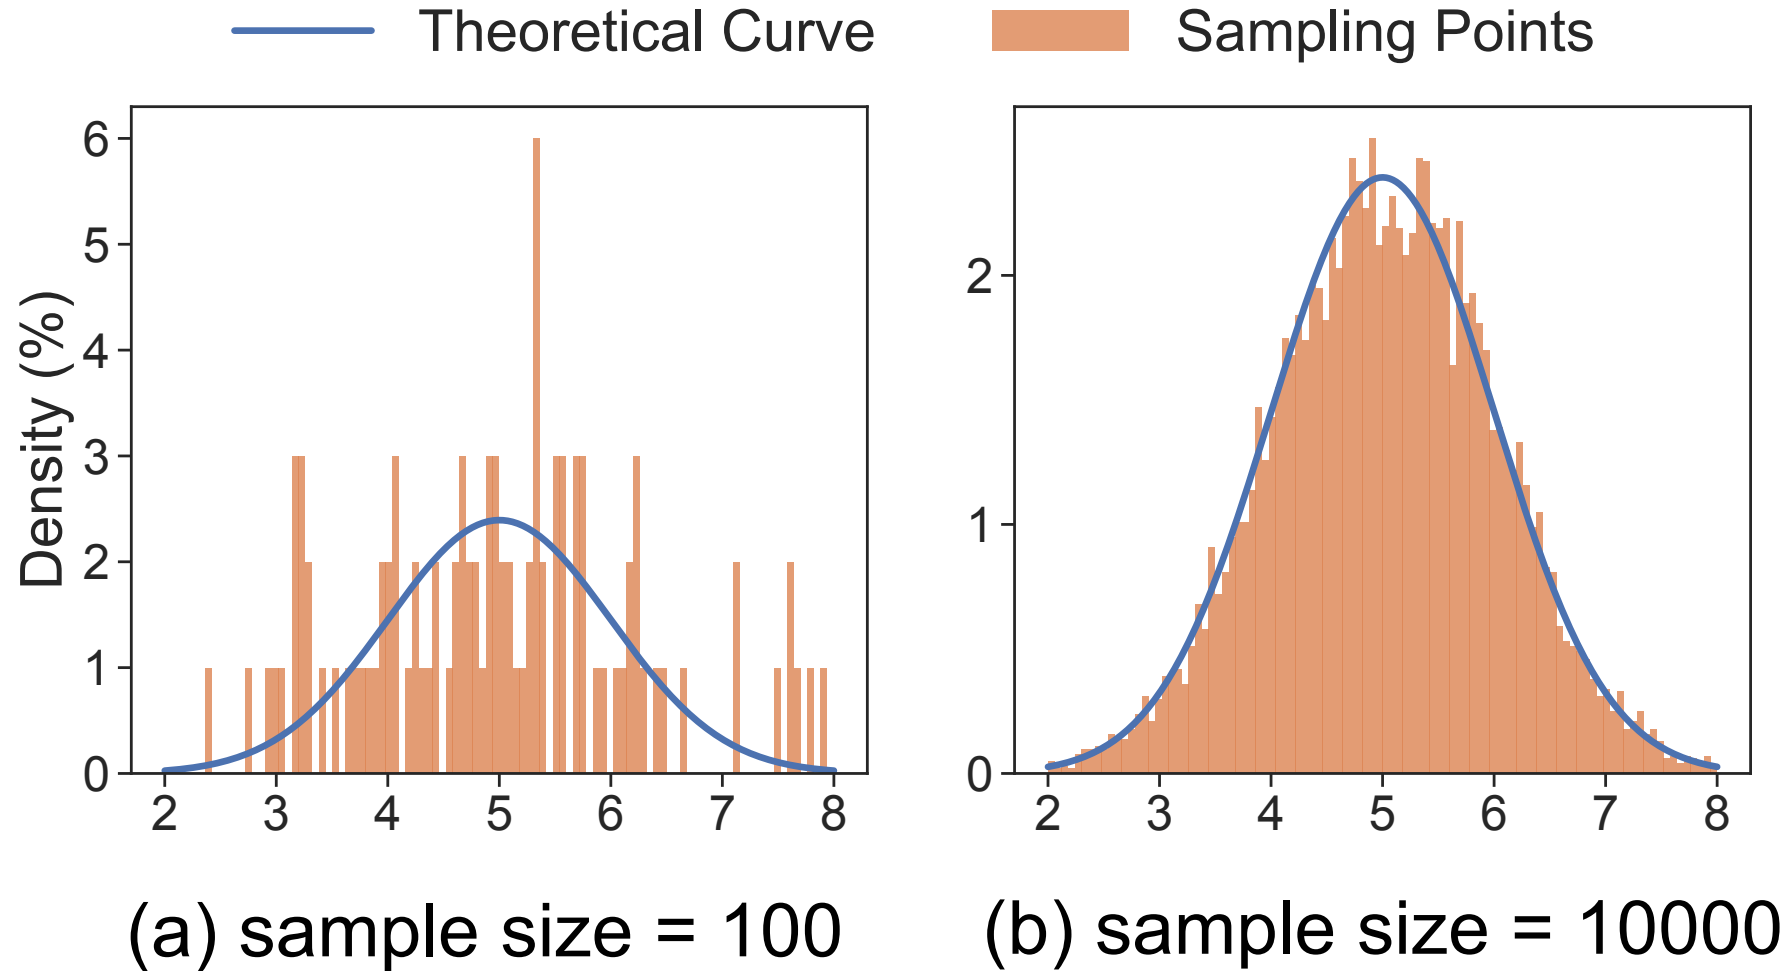

$$\left\{ \begin{array}{l} \textit{Minimize } \textit{Cost}(\mathbf{d}, \mathbf{v}) \\ \textit{St. } \textit{Confidence}(\textit{Latency}(\mathbf{d}, \mathbf{v}) < \varepsilon) \geq \delta \end{array} \right.$$

# Problem Solver: **bound guaranteed sampler**

$$\text{Confidence}(\text{Latency}(\mathbf{d}, \mathbf{v}) < \varepsilon) \geq \delta$$

# Problem Solver: **bound guaranteed sampler**

# Problem Solver: bound guaranteed sampler

- The minimal sample size to guarantee the performance bound with confidence level  $\delta$

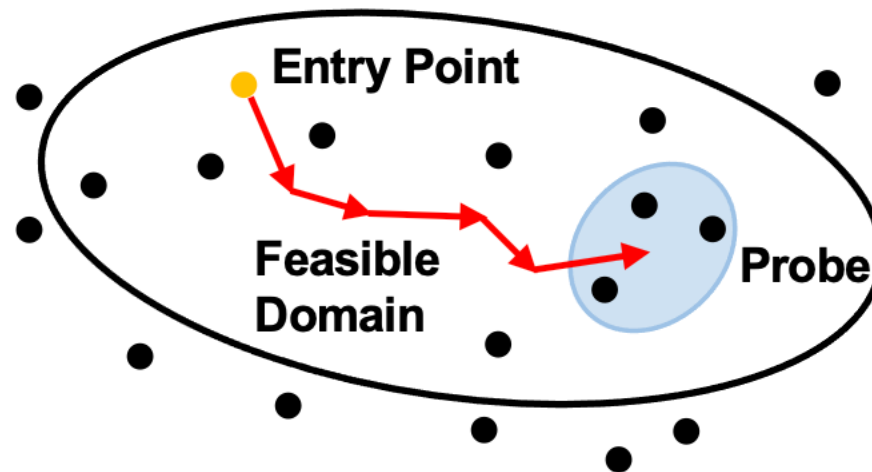

$$\frac{1}{2 \times (1 - \textit{percentile})^2} \log\left(\frac{|D|}{1 - \delta}\right)$$

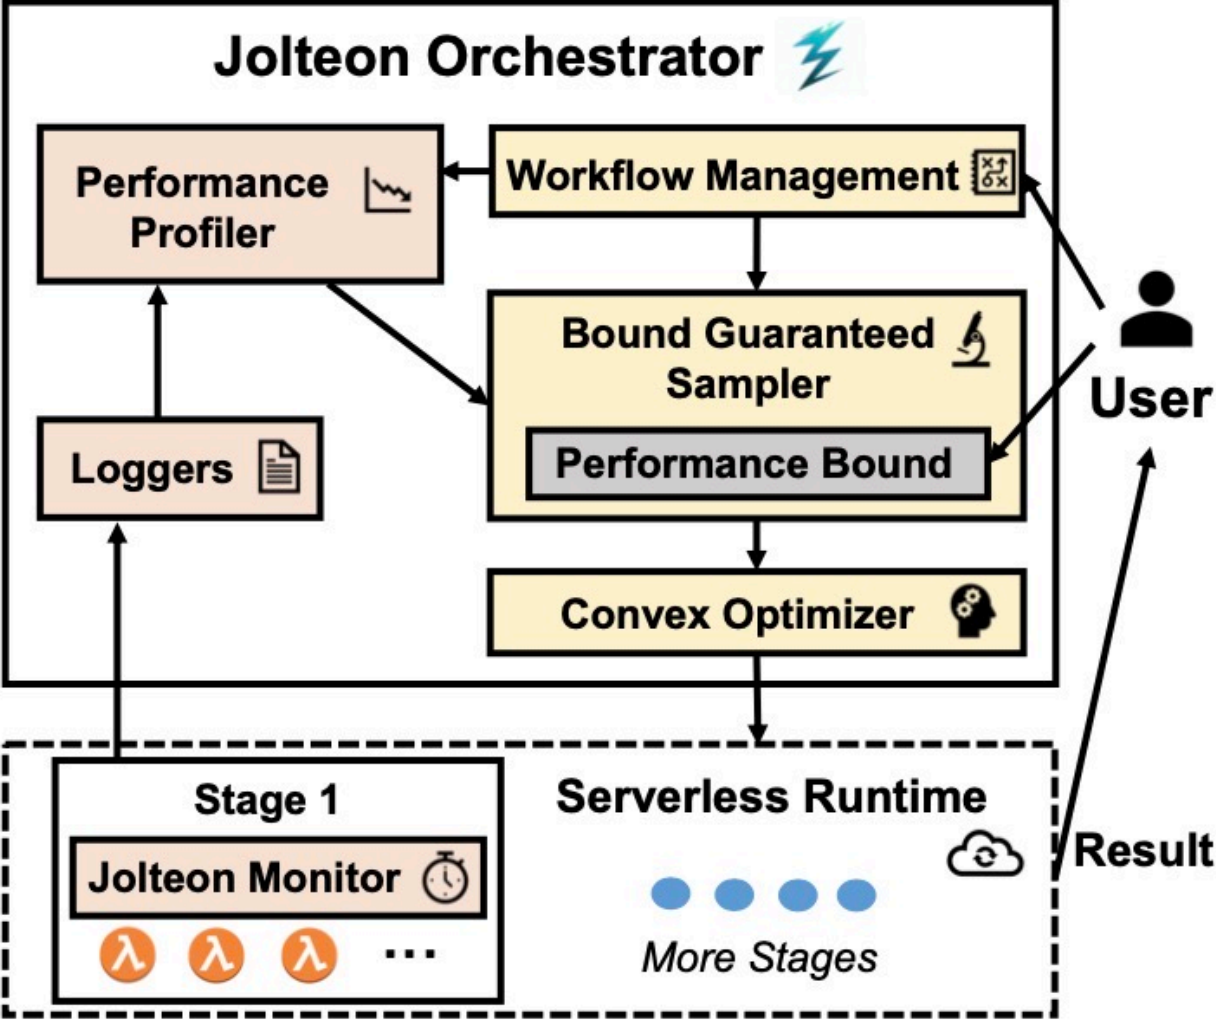

# Problem Solver: solving algorithm with convexity

- Gradient descent algorithm with convexity
- Probe to calibrate the result

● Resource Config → Gradient Descent

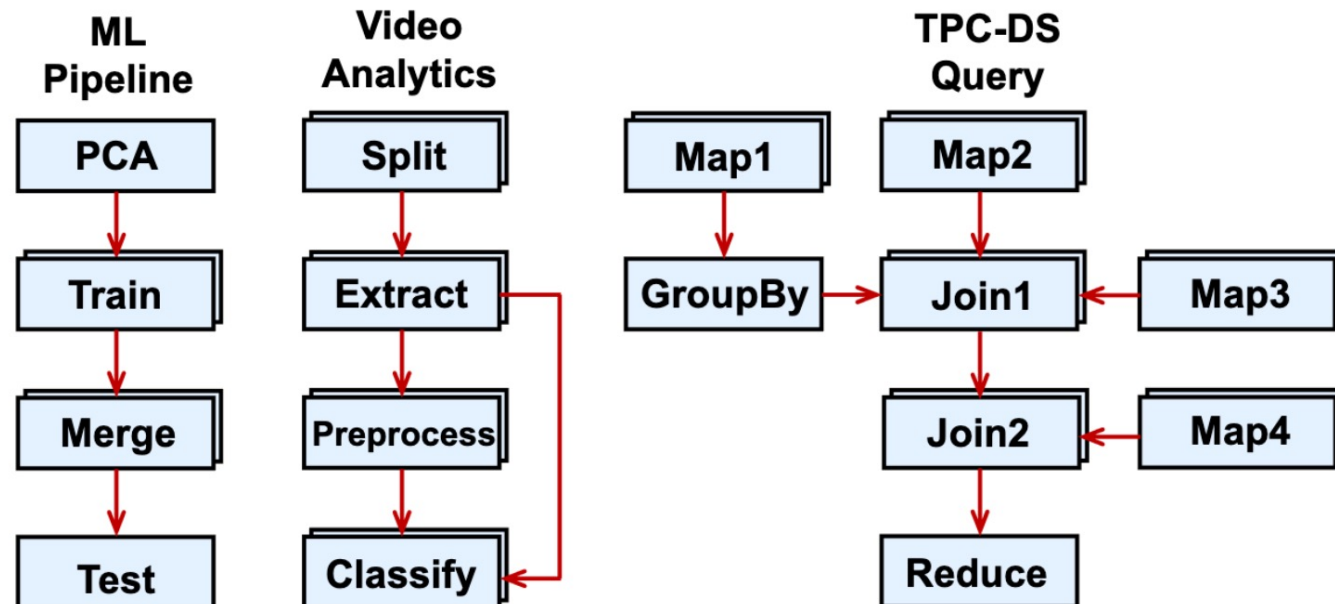

# Jolteon system

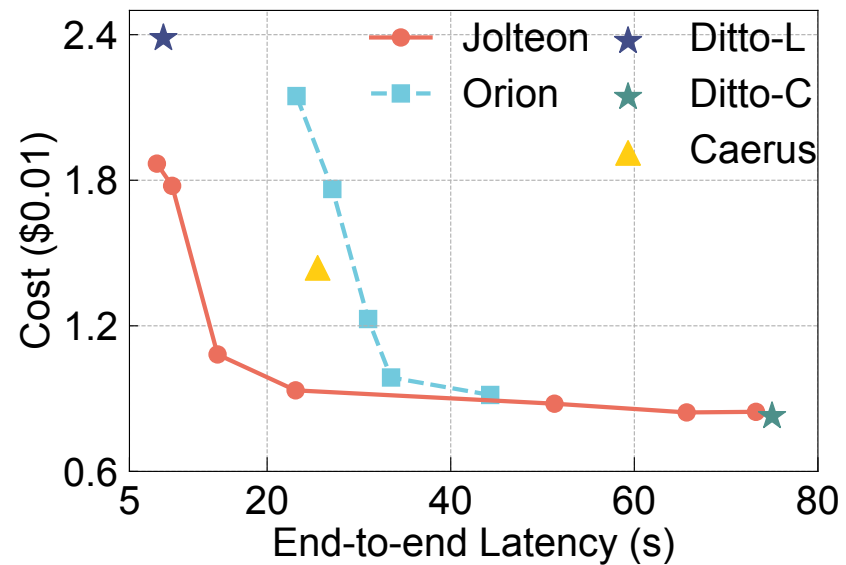

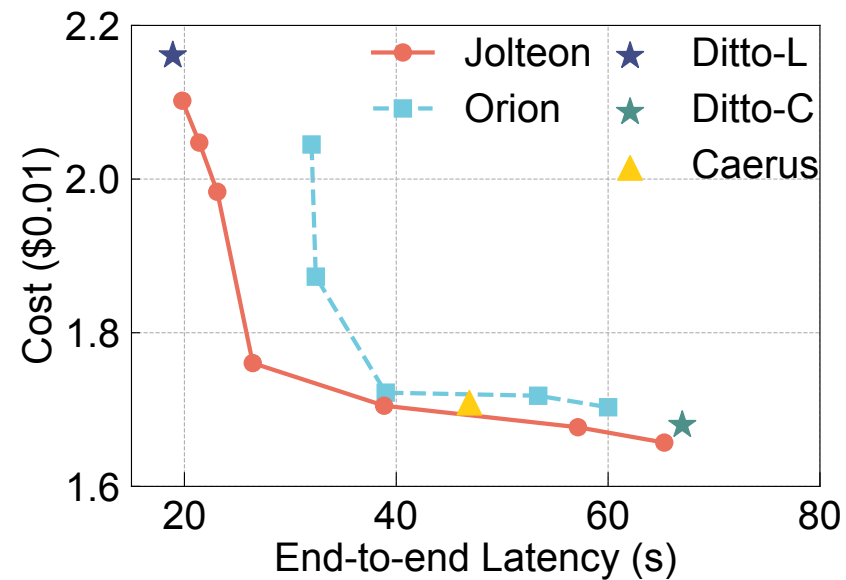

# Evaluation

- Setup on AWS
  - Workflow orchestrator: one AWS c5.12xlarge EC2 server
  - Compute: AWS Lambda function
  - Storage: AWS S3

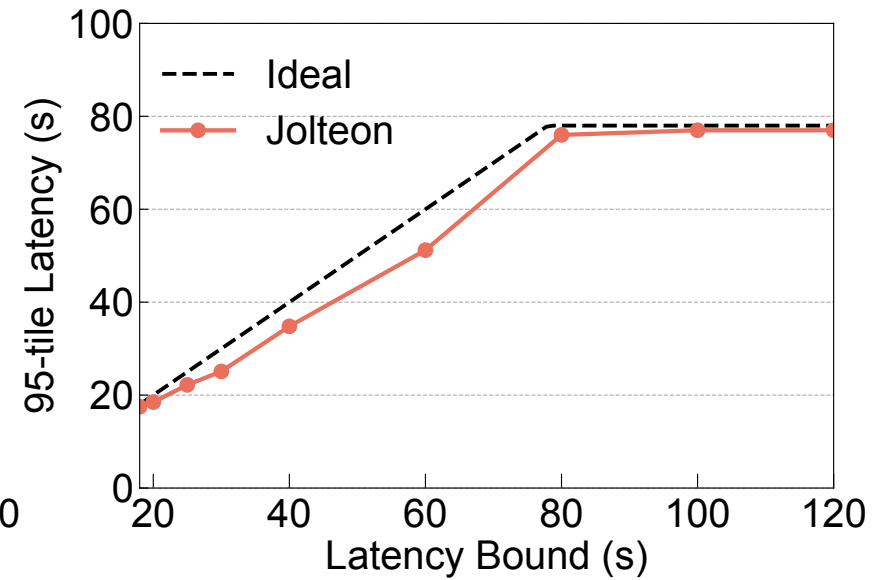

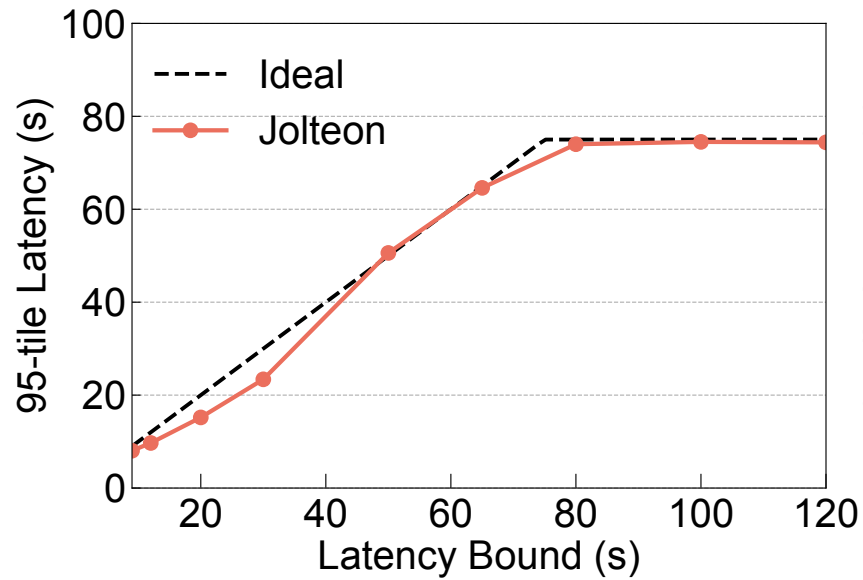

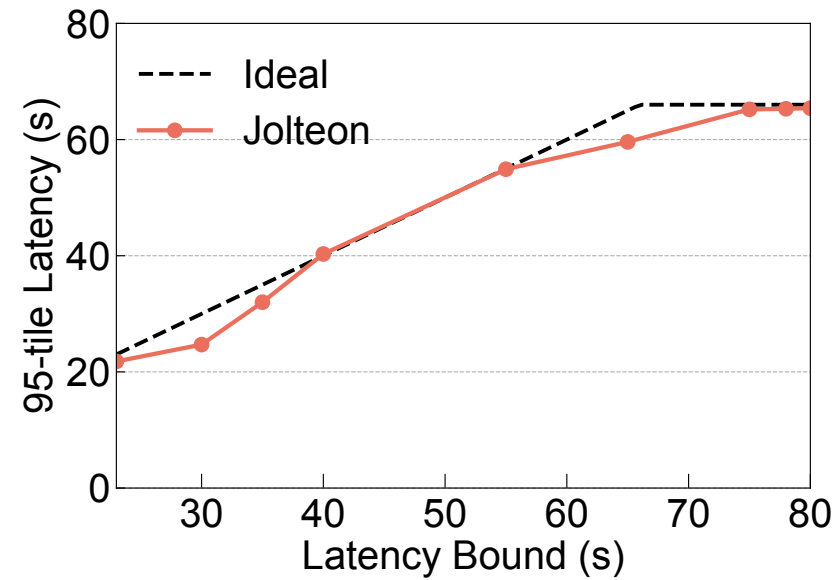

# Evaluation

- Jolteon outperforms Orion by up to  $2.3\times$  on cost and  $2.1\times$  on latency
- Compared to Ditto, Jolteon reduce cost by  $1.8\times$  or latency by  $3.3\times$ , with a  $\leq 11\%$  reduction on the other metric.

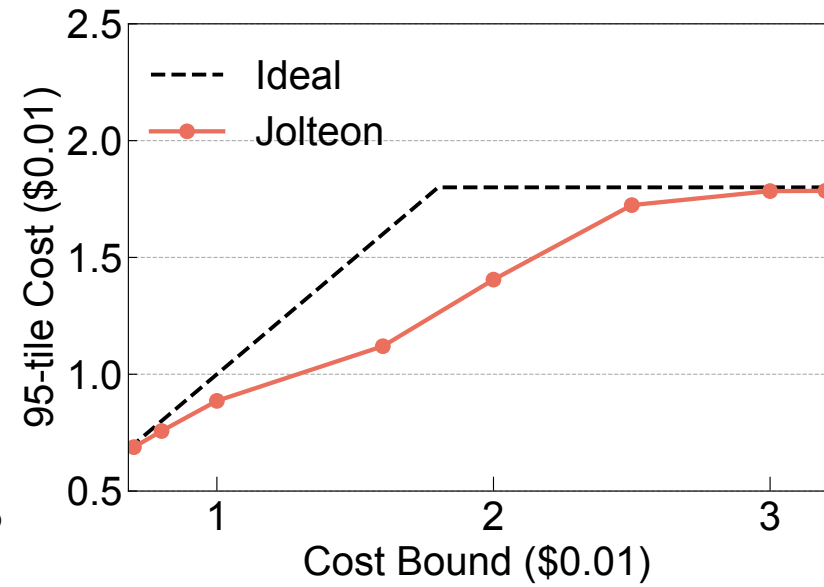

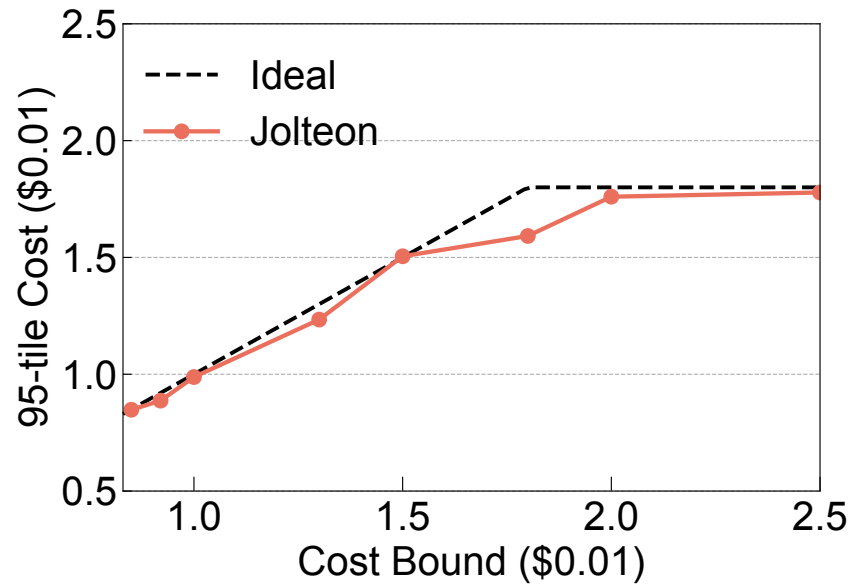

# Evaluation

- Jolteon is able to guarantee the latency bound

# Evaluation

- Jolteon is able to guarantee the cost bound

# Evaluation

- Accuracy of the performance model
- Optimization problem solving time
- Performance model fit time
- Sensitivity of problem solver

# Conclusion

- Serverless workflow orchestrator that provides automatic resource configuration to satisfy application-level requirements
- Jolteon uses stochastic performance model to form an optimization problem, which **minimize the cost** under a latency bound or **minimize the latency** under a cost bound.
- Jolteon outperforms Orion by up to  $2.3\times$  on cost and  $2.1\times$  on latency. Compared to Ditto, Jolteon reduce cost by  $1.8\times$  or latency by  $3.3\times$ , with a  $\leq 11\%$  reduction on the other metric.

Thank you!
